

Relocating a local database (VistaDB)

Version: 2018-11-23

IBF – YOUR PARTNER FOR EFFICIENT CE MARKING

General information

Until now, you have used Safexpert as a local installation with a local database (VistaDB, no SQL) on a PC. Now you receive a new PC and want to continue using Safexpert with your projects. You have two options for how to do this:

1. Copying the database

On the current PC

Find out where your local database is located:
 System -> Options -> Database connection

General	\$	1		
Interface		Settings: Access to the database		
Basic detault settings Safexpert Reminder		Database conn	ection information about the database	
Spelling		Database type:	Local database	
Project	\$	Database path:	C:\ProgramData\Safexpert\Data\Data.vdb5	
Project defaults Project management Automatic checks		L		
System	\$			
Database connection				

Copy your database in the Windows File Explorer and paste it to a network drive or mobile device.

Please note the following:

The database can be several hundred megabytes in size. Check whether there is enough space on the target drive. The **ProgramData** folder is "hidden" by default in Windows and must be made visible in the Explorer

The **ProgramData** folder is "hidden" by default in Windows and must be made visible in the Explorer options.

On the target PC

- Copy the database on your new PC to a directory of your choice.
- Download the current version of Safexpert -> <u>https://www.ibf-solutions.com/en/downloads/</u> and select the installation type Complete (client and database) when installing.
- In the **Database** step, select the path of your database:

Typ: Lokale Datent Einstelungen Server: Port: 0 Datenbank: C:\ProgramDa	ank	~
Entelungen Server: Port: 0 Datenbank: C:\ProgramDa		
Server: Port: 0 Datenbank: C-VProgramDa		
Port: 0 Datenbank: C:\ProgramDa		
Datenbank: C:\ProgramDa		
	a\Safexpert\Data	a\Data.v

2. Reinstall database

On the current PC

- Download and install your current license file:
 Update wizard -> Check availability -> Download and install offered license file
- Export the required projects to a network drive or external data medium:
 Project management -> Select project -> Export project

😽 Manage projects			
Actions			
Filter: General (7) -		Copy project Move project to recycle	bin
Display: All -	Excel export *	Set up new project - Export project Reduced Pseudonymisation of pro	oject
Filter		Manage a pro	ject

If you have created your own documents in the libraries and lists next to the Safexpert standard documents, these must also be exported.

ee 🛛 😣 - 🖪 🎿 =	Start - User:	 Safexpert 8.4 SP1 (54) 	
Projects Edit Status StandardsManager I	Update wizard System		
	Pictograms library Components library Operating instruction library	Emits of the product	Full quality Notified assurance bodies
Company	Libraries	Lists	Machinery Directive

On the target PC

- Download the current version of Safexpert -> <u>https://www.ibf-solutions.com/en/downloads/</u> and select the installation type **Complete (client and database)** during installation.
- Import projects from network drive or external data medium:

Project management -> Import project

🖏 Manage projects						
Actions						
Filter: General (7) +	S			Copy project	Move project to recycle bin	Check out Project
Display: All -		Excel export •	Set up new project *	Export project	Pseudonymisation of project	Unlock Project
Filte			0		Manage a project	

• Possibly import your own libraries and lists.

Please note the following:

You can only export or import one project, library or list at a time. Multiple selection is not possible.

You are now using a new database which has to be registered with us. Please send us an e-mail with your license number to support@ibf-solutions.com.
